The Hotchkiss Titan 1 ICBM Missile Base is America's largest underground missile base! It's dark and 55 degrees year round. There are places where you could fall 16 stories and splatter on the concrete floor below. The 14 foot thick walls were built to withstand nuclear war. You'll hike through thousands of feet of tunnels to subterranean buildings scattered throughout the 57 acre site. You'll travel deep underground! The buildings were scrapped out after decommissioning and most of the 1950's equipment was removed. There is lots to see! www.themissilebase.com #huckleberrycountry

"This photo was taken in Colville. I was visiting some friends who told me about eagles feeding on a carcass in their neighbor's yard. So I went to have a look for myself and took this picture." - Janet Labrecque, Colville, WA #huckleberrycountry
